

**NEWSFLASH**

# Reaching the Limit

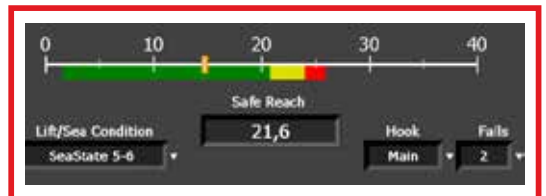

**The Mipeg has a new feature to increase productivity and save time without compromising safety limits: The Safe Reach Indicator!**

Mipeg X is expandable and flexible. The Safe Reach Indicator may be selected and displayed as a standard option in the Safe Load Indicator package.

The Safe Reach feature is selected on the Mipeg X display. Using an easy to understand horizontal bar graph, you will see the operating radius and how far you can safely go.

The Safe Reach will remove any guesswork allowing the lift cycle to be planned. This will help increase productivity and save time without compromising safety limits.

For additional information on Mipeg's Safe Reach, please contact Harald Goldstein, Global Business Developer - Crane Products, [harald.goldstein@xylem-inc.com](mailto:harald.goldstein@xylem-inc.com) or look for additional options by visiting the [Aanderaa website](#).
